Allowable Subject Matter

Claims 1-9 and 11-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1, the prior art of record does not teach nor suggest, in the claimed combination, a magnet system for a relay comprising: a coil body with a coil, a flange, and a side arm; a core partially enclosed by the coil; a yoke having a first yoke leg attached to a first end of the core and a second yoke leg extending parallel to the core, the second yoke leg having an armature mounting portion formed on an upper side of the second yoke leg remote from the coil; a pole having a first pole leg connected to a second end of the core and a second pole leg extending parallel to the core, the second pole leg having an upper surface substantially aligned with the armature mounting portion such that when an armature is mounted on the armature mounting portion, a working air gap is formed between a coil-side armature face and the upper surface of

the second pole leg, the pole is positioned between the side arm and the first flange; a fixed contact carrier with a fixed contact, the fixed contact carrier having side portions that extend from the fixed contact carrier and hold the fixed contact carrier in pockets of the side arm of the coil body such that the fixed contact is arranged parallel to surfaces of the armature mounting portion and the second pole leg; and the magnet system is extrusion coated with a plastic material, the coil, the voke, the pole, and the fixed contact carrier being embedded in the plastic material. In particular, the prior art of record fails to teach and/or suggest a relay magnet system as claimed wherein the pole is positioned between the side arm of the coil body and the first flange of the coil body: a fixed contact carrier having side portions that extend from the fixed contact carrier and hold a fixed contact carrier in pockets of the side arm of the coil body such that the fixed contact is arranged parallel to surfaces of the armature mounting portion and the second pole leg; and the magnet system is extrusion coated with a plastic material, the coil, the voke, the pole, and the fixed contact carrier being embedded in the plastic material.

Claim 11, the prior art of record does not teach nor suggest, in the claimed combination, an electromagnetic relay comprising: a magnet system having a coil body a side arm, a flange and a coil, and a core body with a core partially enclosed by the coil; a yoke having a first yoke leg attached to a first end of the core and a second yoke leg extending parallel to the core having an armature mounting portion; a pole having a first pole leg connected to a second end of the core and a second pole leg extending parallel to the core, the pole is positioned between the side arm and the flange; the

magnet system having a fixed contact arranged on a fixed contact carrier substantially aligned with the second pole leg, the fixed contact carrier being offset in a direction of the core and arranged in the coil body, the fixed contact carrier having side portions that extend from the fixed contact carrier and hold the fixed contact carrier in pockets of the side arm of the coil bod2 such that the fixed contact is arranged parallel to surfaces of the armature mounting portion and the second pole leg; and the magnet system is extrusion coated with a plastic material, the coil, the voke, the pole, and the fixed contact carrier being embedded in the plastic material. In particular, the prior art of record fails to teach and/or suggest a relay magnet system as claimed wherein the pole is positioned between the side arm of the coil body and the first flange of the coil body; a fixed contact carrier having side portions that extend from the fixed contact carrier and hold a fixed contact carrier in pockets of the side arm of the coil body such that the fixed contact is arranged parallel to surfaces of the armature mounting portion and the second pole leg; and the magnet system is extrusion coated with a plastic material, the coil, the yoke, the pole, and the fixed contact carrier being embedded in the plastic material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
